

Trivy Open Source Scanner for Container Images

Just Download and Run

Teppei Fukuda (@knqyf263)
Maintainer, Trivy
Open Source Team, Aqua Security

What this webinar will cover today

- ◆ Introduction
 - ◆ What is a vulnerability?
 - ◆ Why is a vulnerability scanner necessary?
- ◆ About Trivy
 - ◆ What is Trivy?
 - ◆ Basic features
 - ◆ Advanced features
 - ◆ New features

Vulnerability (computing)

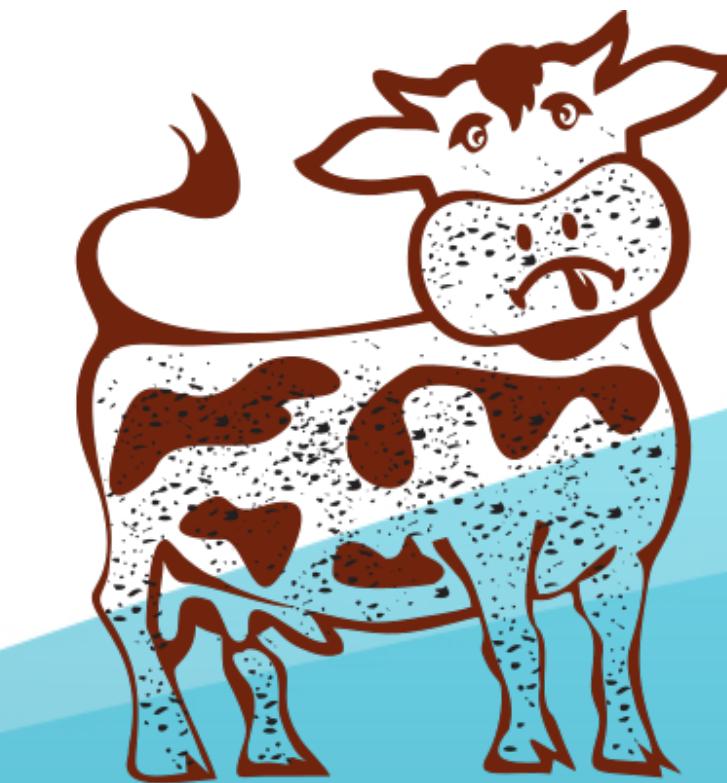

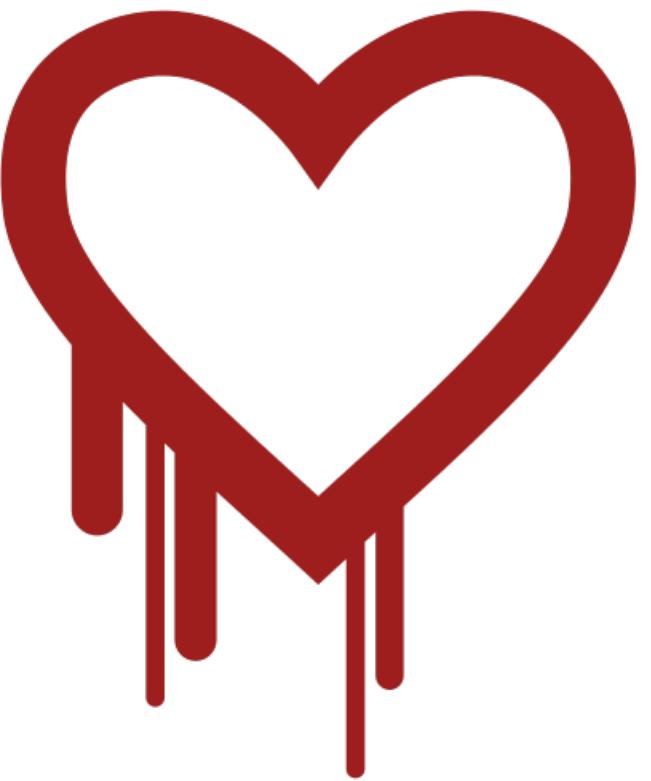

From Wikipedia, the free encyclopedia

In [computer security](#), a **vulnerability** is a weakness which can be exploited by a Threat Actor, such as an attacker, to perform unauthorised actions within a computer system.

Software vulnerabilities

MELTDOWN

DIRTY COW

Common Vulnerabilities & Exposures

CVE® is a [list](#) of entries—each containing an identification number, a description, and at least one public reference—for publicly known cybersecurity vulnerabilities.

CVE Entries are used in numerous cybersecurity [products and services](#) from around the world, including the U.S. National Vulnerability Database ([NVD](#)).

General**Vulnerabilities****Vulnerability Metrics****Products****Configurations (CCE)****Contact NVD****Other Sites****Search****+ Vulnerabilities**

CVE defines a vulnerability as:

"A weakness in the computational logic (e.g., code) found in software and hardware components that, when exploited, results in a negative impact to confidentiality, integrity, or availability. Mitigation of the vulnerabilities in this context typically involves coding changes, but could also include specification changes or even specification deprecations (e.g., removal of affected protocols or functionality in their entirety)."

Using Vulnerabilities within the NVD

1. Vulnerability Search and Detail Pages

2. Download vulnerability information for all published CVE vulnerabilities from the [NVD Data Feeds](#)

+

A CVE that is in the **RESERVED** state in the CVE Dictionary will not appear in the NVD.

Heartbleed (CVE-2014-0160)

Containers, images and vulnerabilities

Vulnerability scanner

From Wikipedia, the free encyclopedia

A **vulnerability scanner** is a [computer program](#) designed to assess computers, computer systems, networks or applications for known weaknesses.

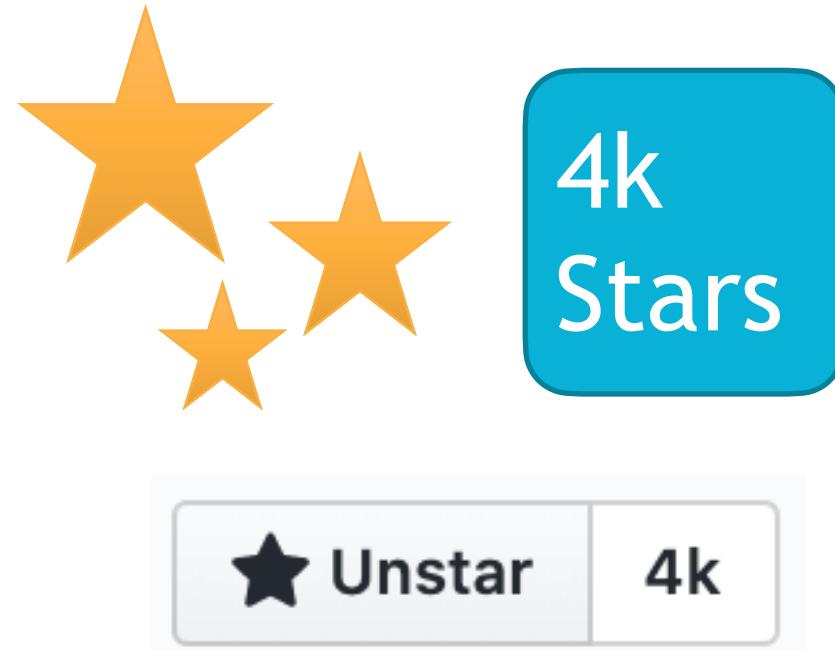

Image vulnerability scanning

- Identify the packages & versions in the image
- Cross-reference with vulnerability database
 - There are distributions: Linux kernel + shell, init system, package manager, etc.
 - A vendor backports security fixes
 - Upstream: 1.0.1 fixes CVE-2020-XXXX
 - Red Hat: 1.0.0-2.el7 fixes CVE-2020-XXXX
 - Debian: 1.0.0-deb9u1 fixes CVE-2020-XXXX

Trivy

Trivy

- Open source scanner for container images
- Developed in 2019

trivy

<https://github.com/aquasecurity/trivy>

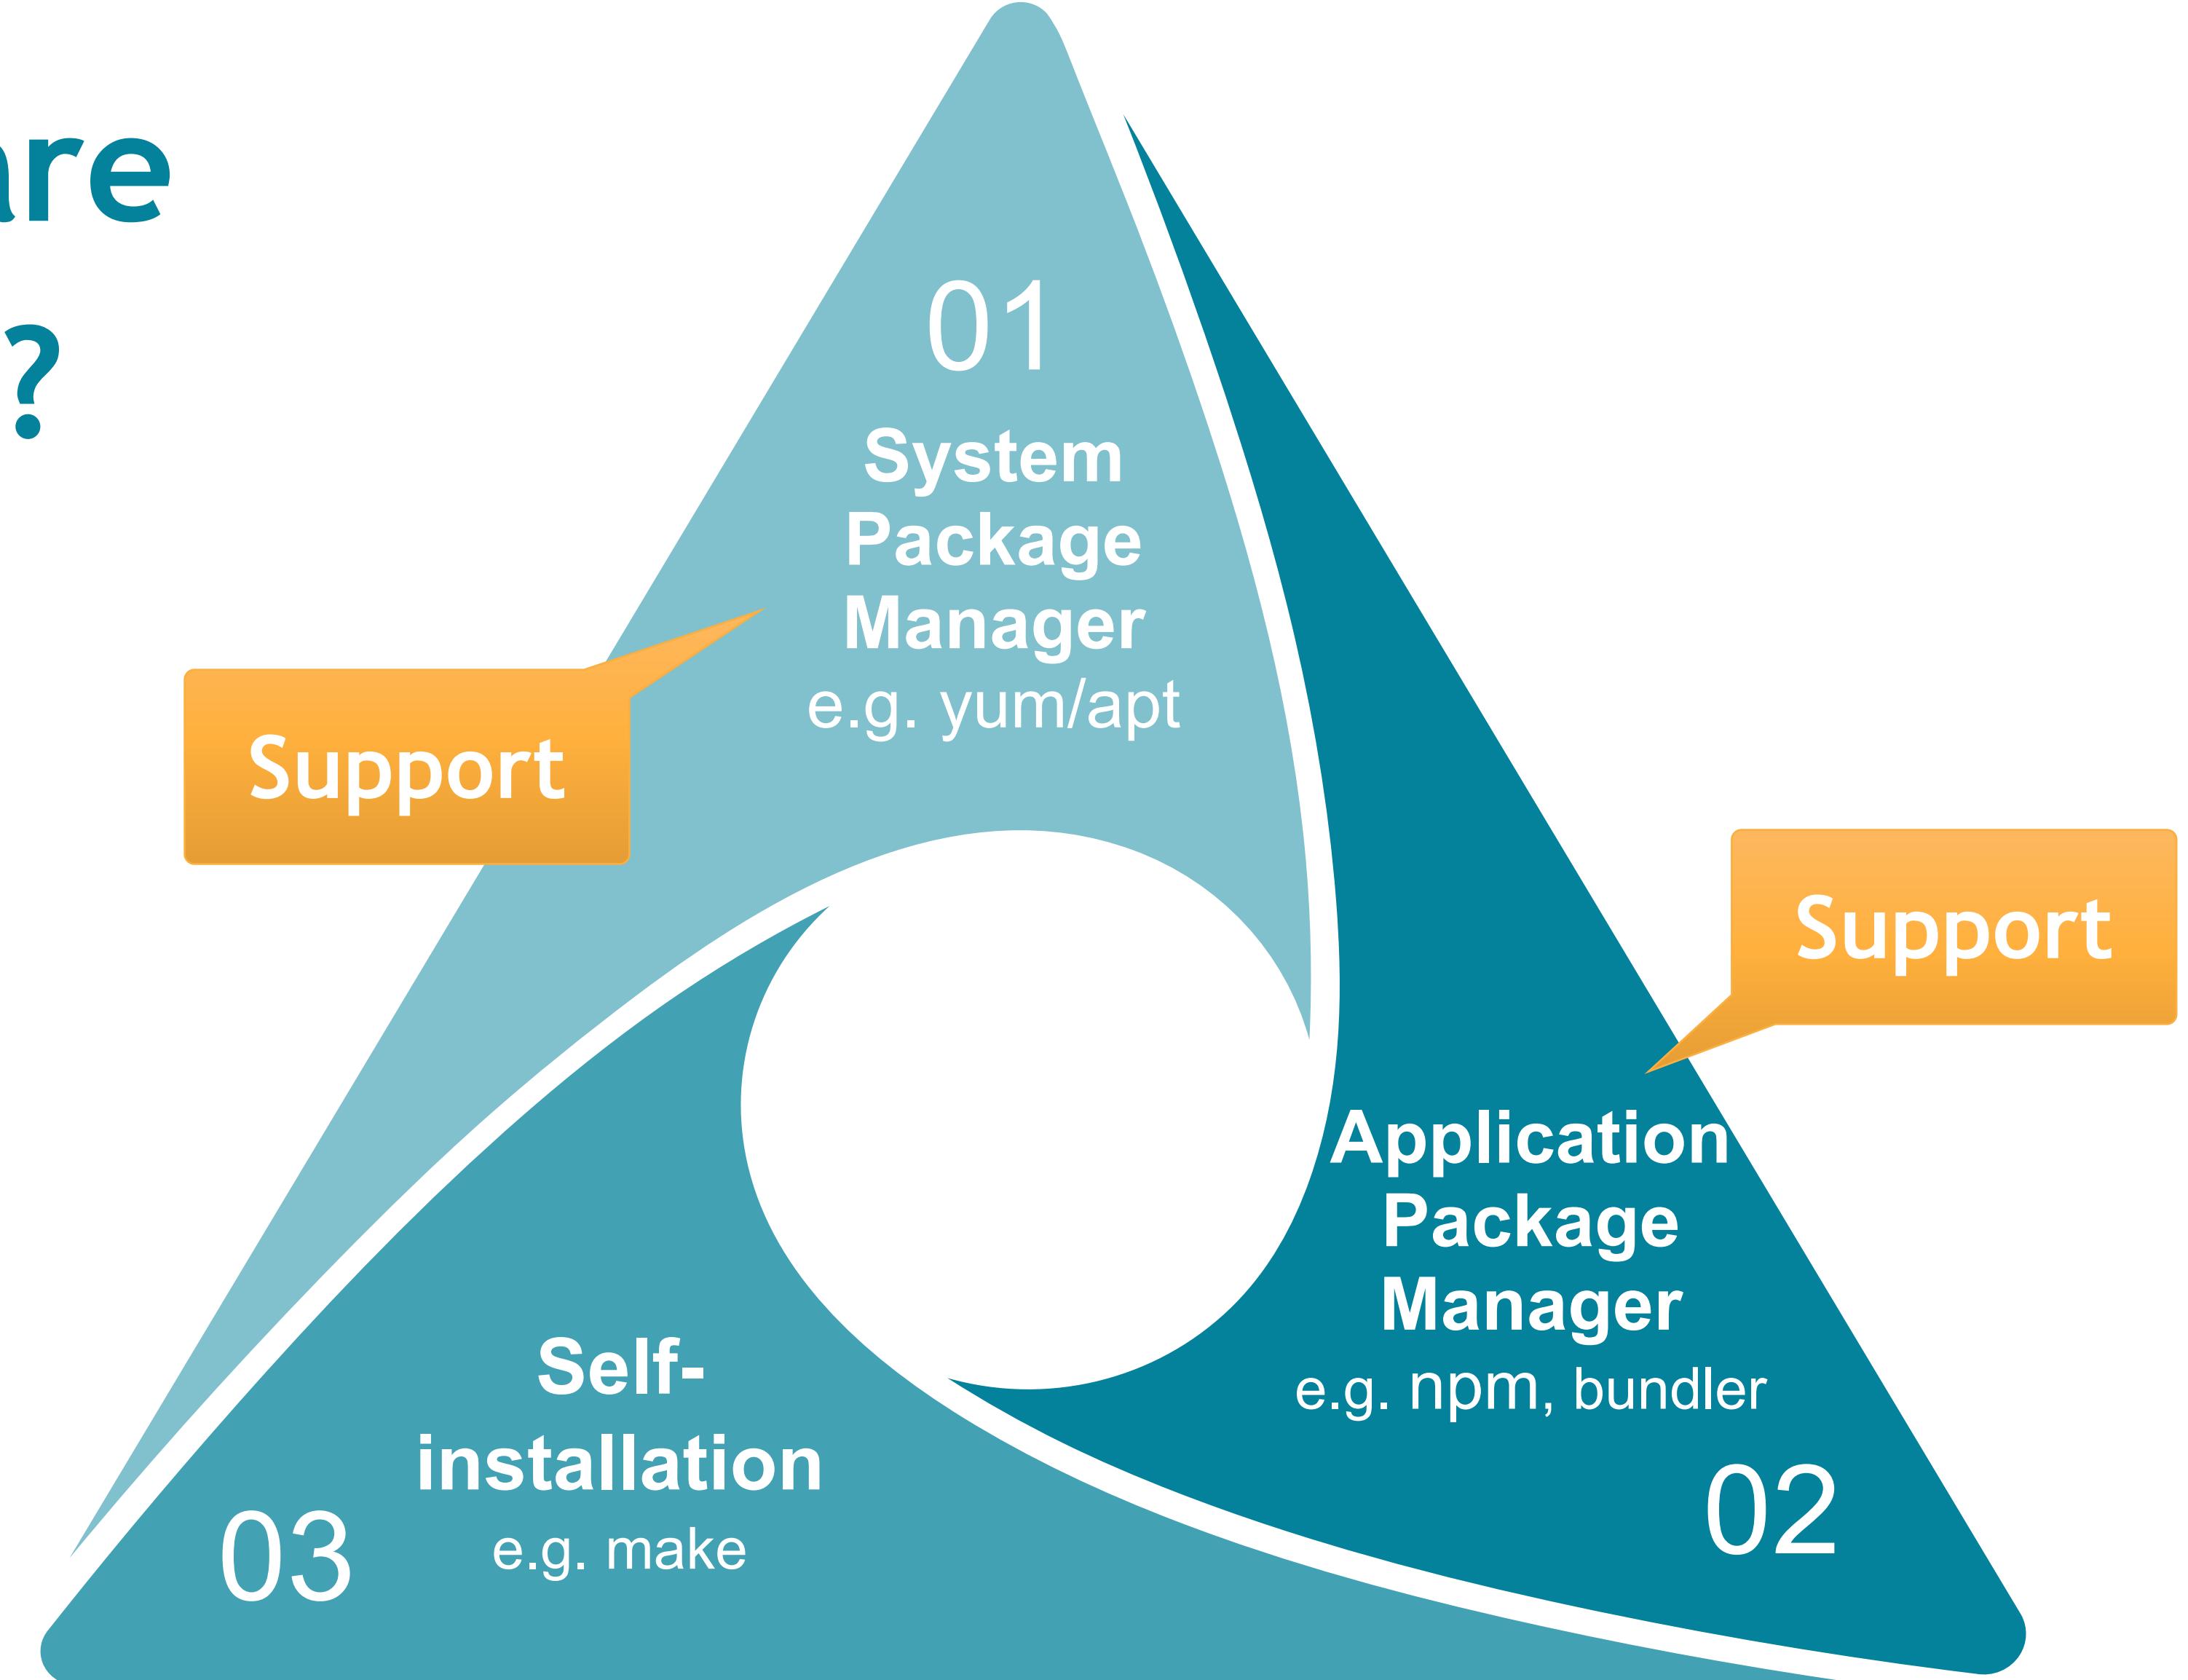

Features

- Detect comprehensive vulnerabilities
- Easy installation
- Simple
- High accuracy
- DevSecOps
- Support multiple formats

Features

- Detect comprehensive vulnerabilities
- Easy installation
- Simple
- High accuracy
- DevSecOps
- Support multiple formats

How does software get into a server?

Detect comprehensive vulnerabilities

- System Package Manager
 - apt
 - yum
 - apk
- Application Package Manager
 - Bundler
 - Composer
 - Pipenv
 - Poetry
 - npm
 - yarn
 - Cargo

Support OS

Alpine Linux	Red Hat Universal Base Image	Red Hat Enterprise Linux	CentOS	Debian GNU/Linux	Ubuntu	Amazon Linux
✓	✓	✓	✓	✓	✓	✓

Oracle Linux	openSUSE	SUSE Enterprise Linux	Photon OS	Google Distroless	Fedora	Windows
✓	✓	✓	✓	✓		

Features

- Detect comprehensive vulnerabilities
- Easy installation
- Simple
- High accuracy
- DevSecOps
- Support multiple formats

Installation

RHEL/CentOS

```
$ sudo vim /etc/yum.repos.d/trivy.repo
[trivy]
name=Trivy repository
baseurl=https://aquasecurity.github.io/trivy-repo/rpm/
releases/$releasever/$basearch/
gpgcheck=0
enabled=1
$ sudo yum update
$ sudo yum install trivy
```

Installation

macOS

```
$ brew install aquasecurity/trivy/trivy
```

Install script

The install script downloads the trivy binary based on your OS and architecture

```
$ curl -sfL https://raw.githubusercontent.com/aquasecurity/trivy/master/contrib/install.sh | sh -s -- -b /usr/local/bin
```

Features

- Detect comprehensive vulnerabilities
- Easy installation
- Simple & Fast
- High accuracy
- DevSecOps
- Support multiple formats

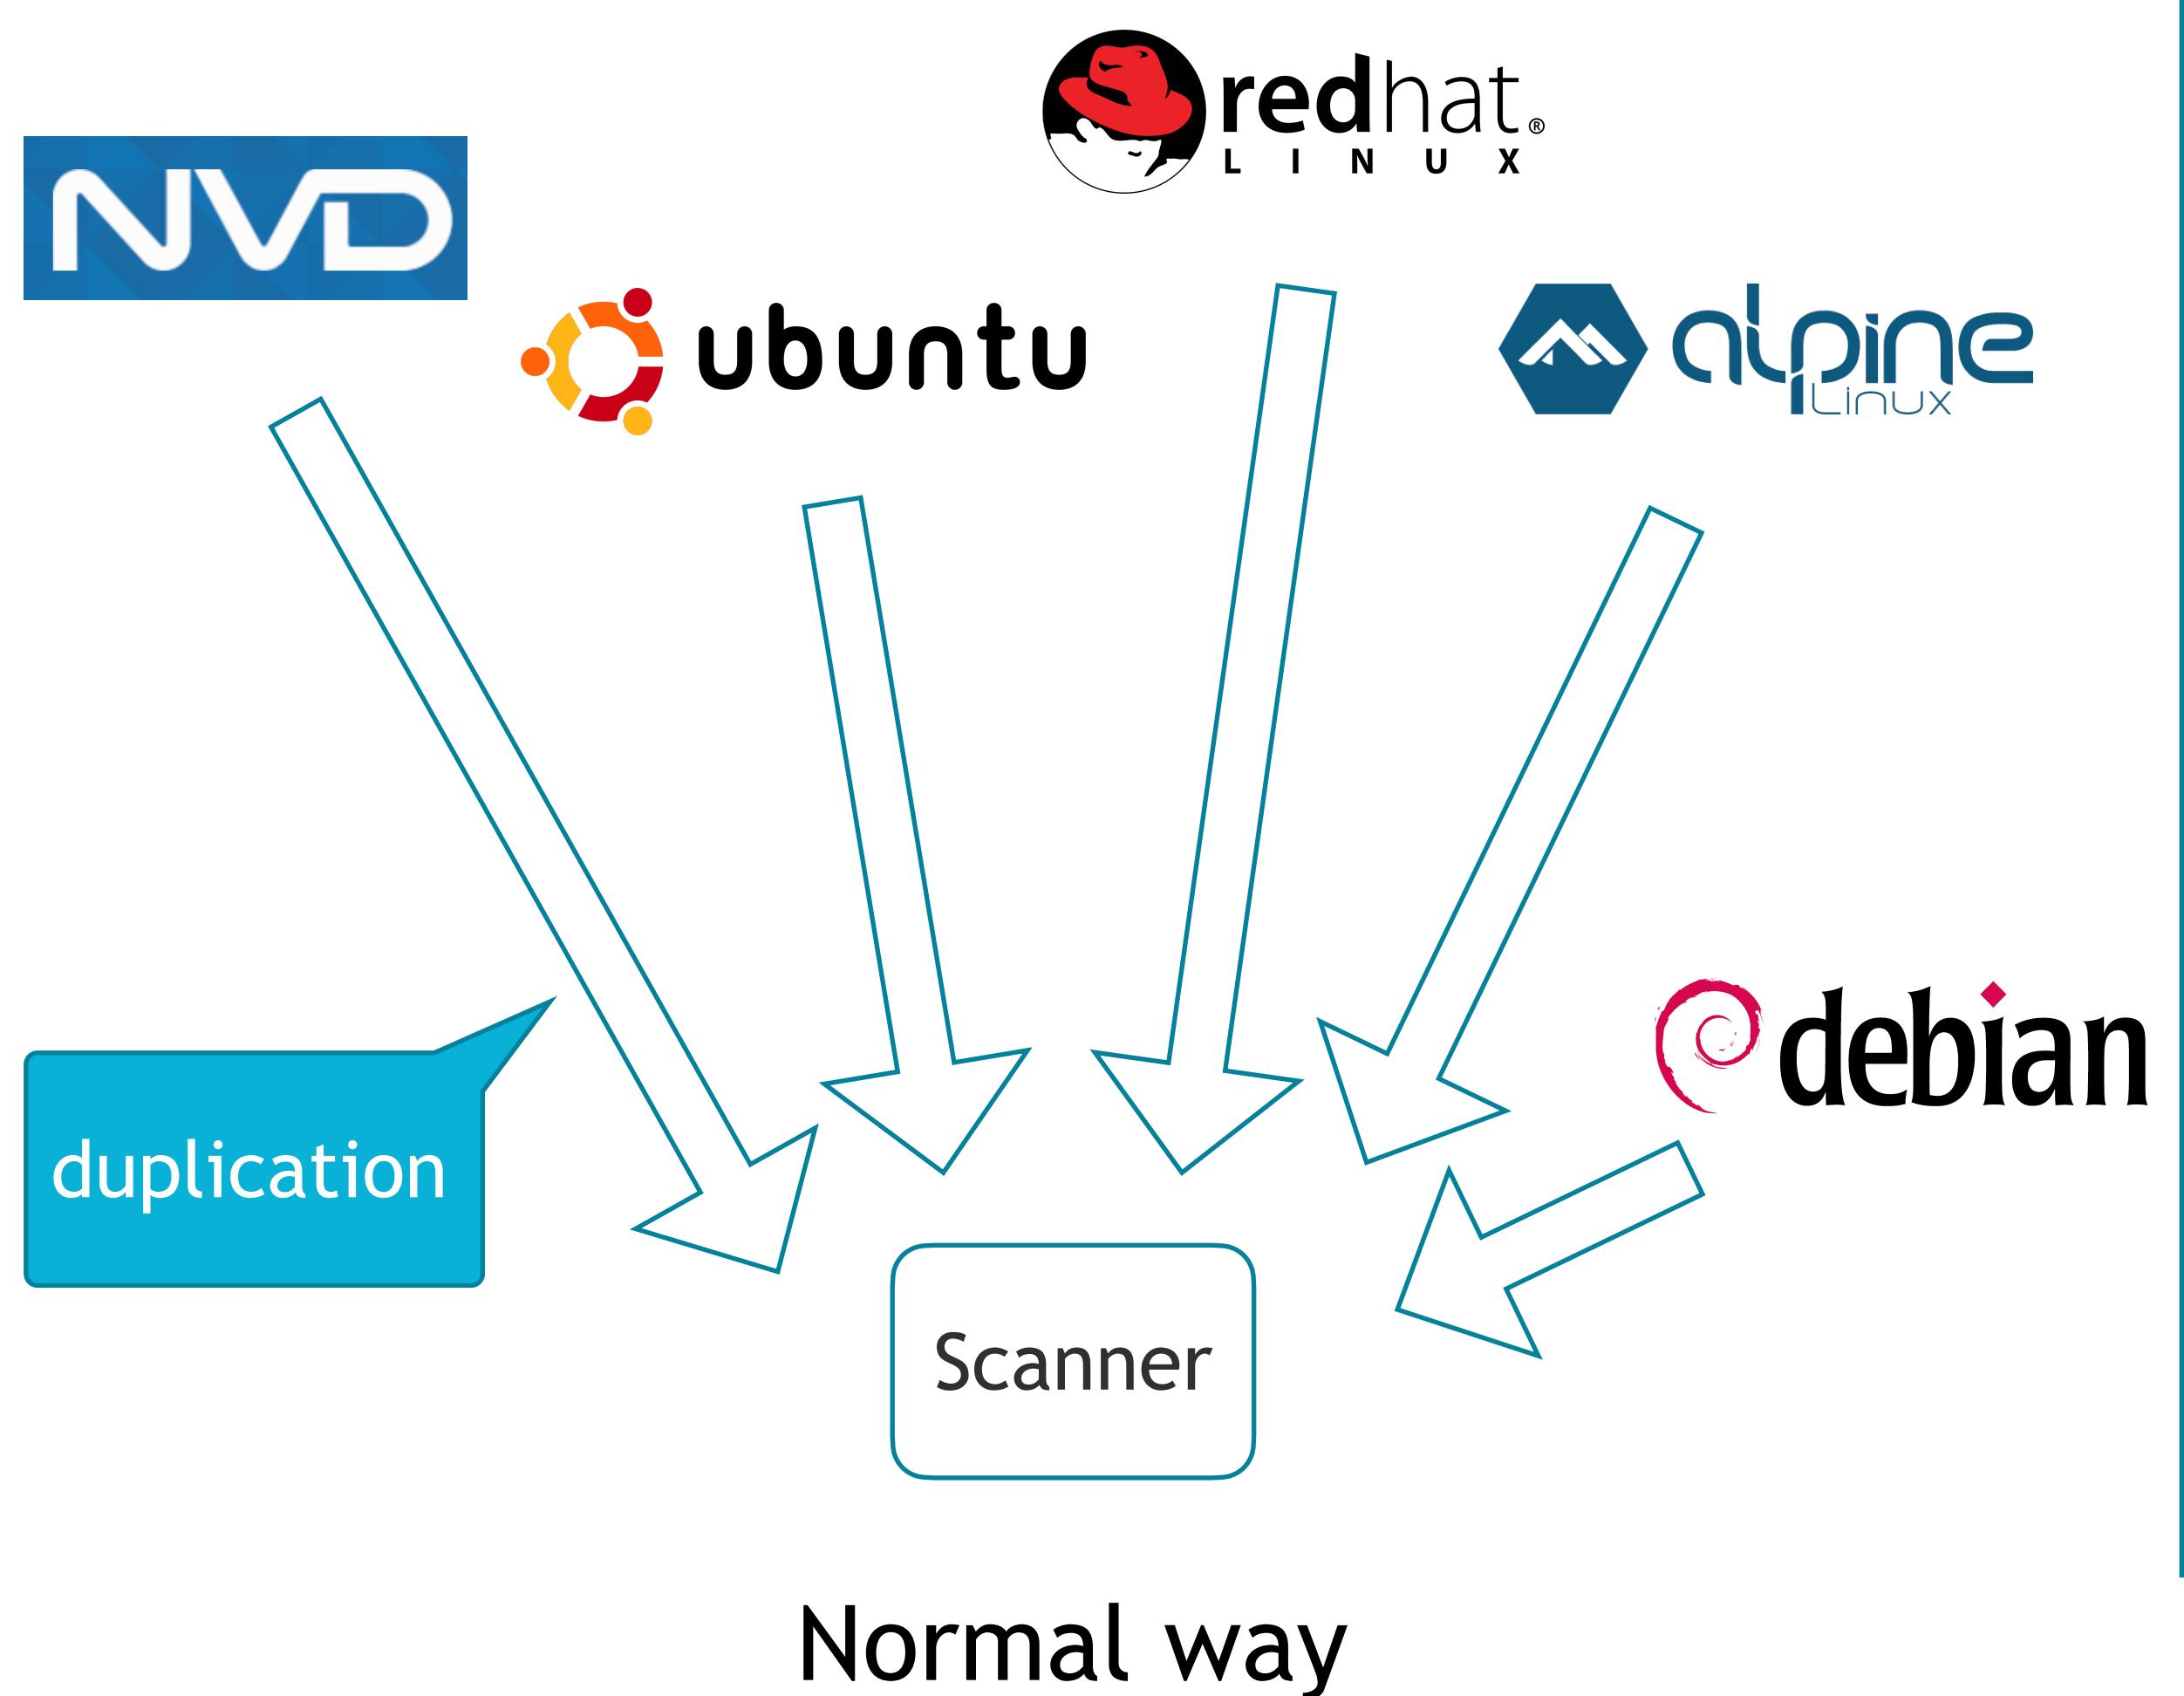

Run

```
$ trivy image [YOUR_IMAGE_NAME]
```

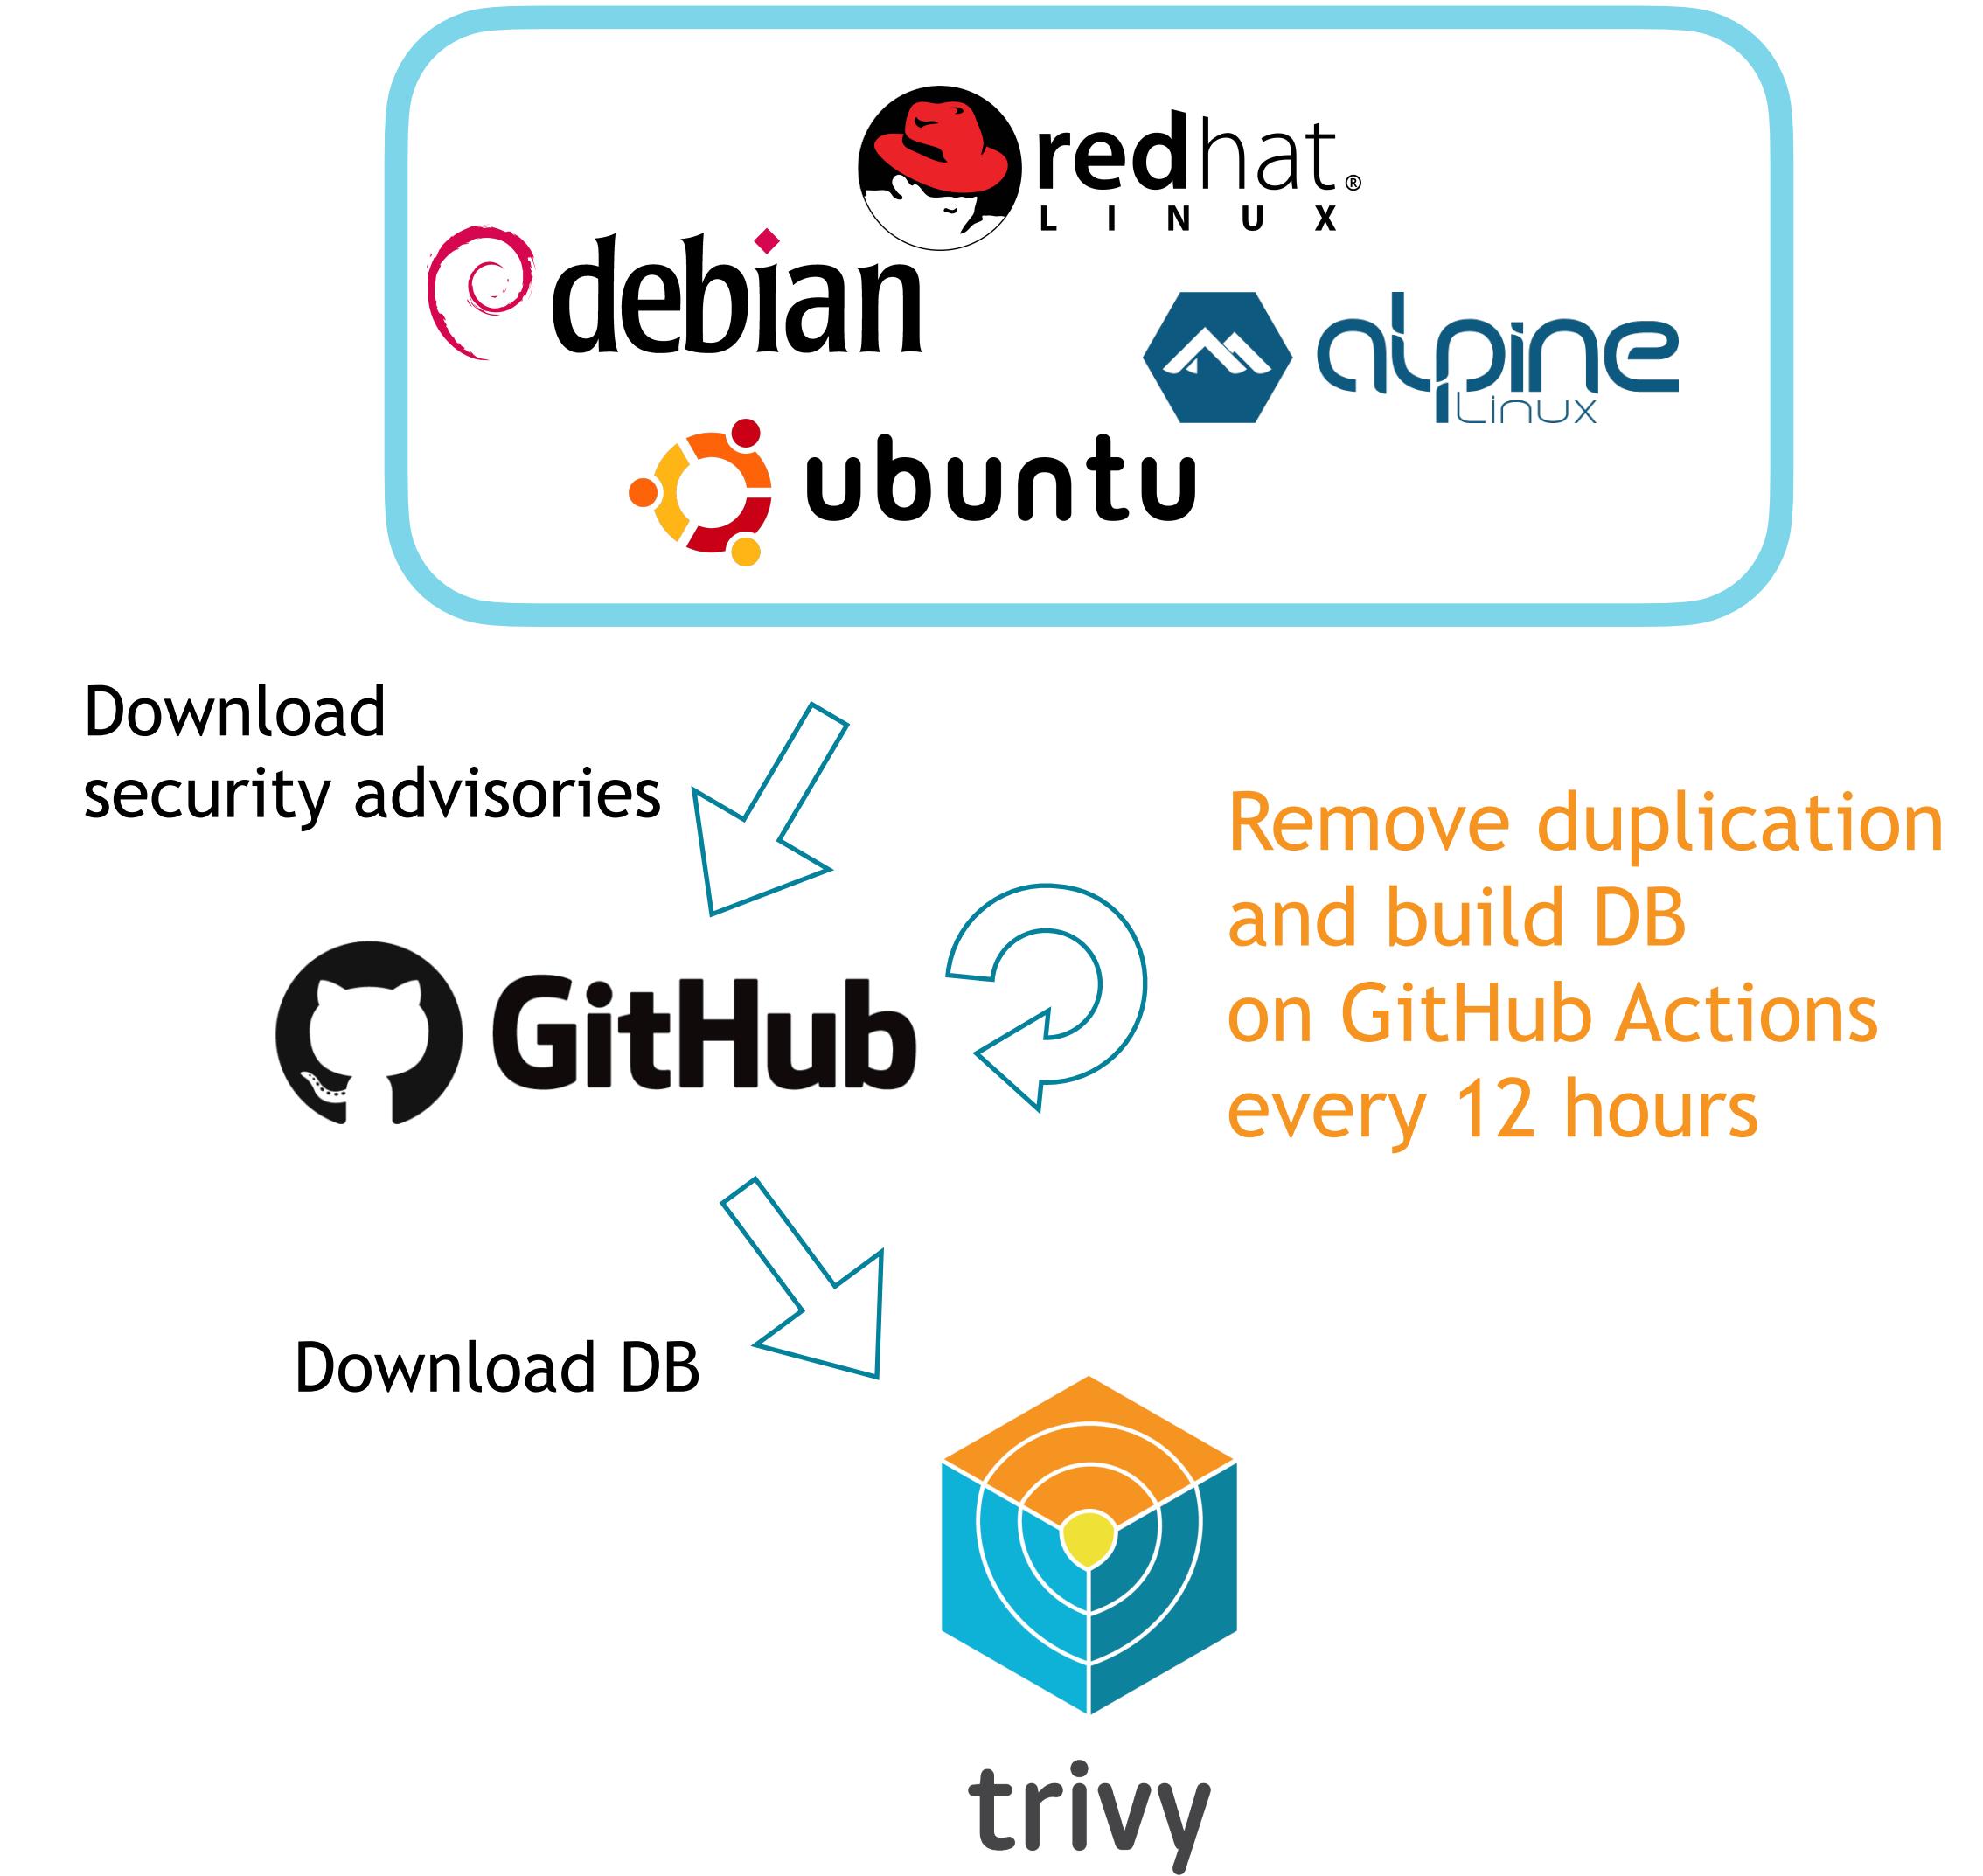

Fast

- Downloading vulnerability information usually takes a while
 - Full database (default)
 - includes description and references
 - It takes about **10 seconds** on the first run
 - Light database (--light option)
 - doesn't include the details
 - It takes **a few seconds** on the first run

New issue

json-c: integer overflow and out-of-bounds write (CVE-2020-12762)

json-c through 0.14 has an integer overflow and out-of-bounds write via a large JSON file, as demonstrated by printbuf_memappend.

References:

- <https://nvd.nist.gov/vuln/detail/CVE-2020-12762>
- <https://cve.mitre.org/cgi-bin/cvename.cgi?name=2020-12762>

Patches:

- <https://github.com/json-c/json-c/pull/608> (0.14)
- <https://github.com/json-c/json-c/pull/607> (0.13.x)

Affected branches:

- master
- 3.11-stable
- 3.10-stable
- 3.9-stable

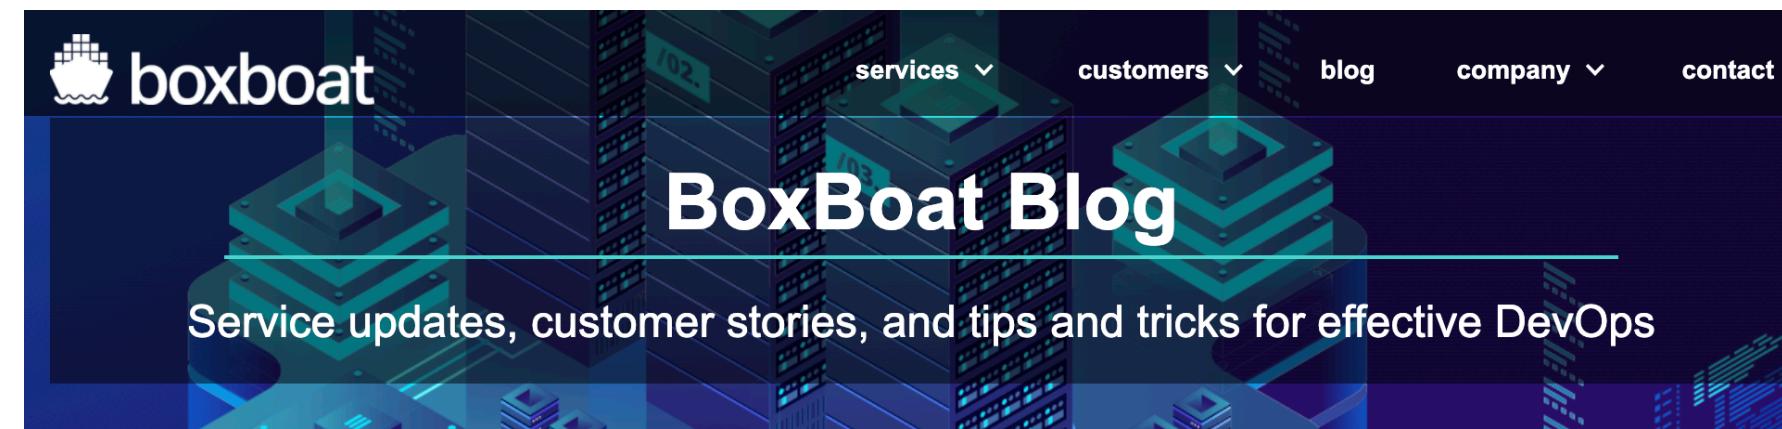

Edited 3 days ago by Leo

0.14-0 or less is vulnerable

DevSecOps

GitHub Action from  Azure

Container Scan

This action can be used to help you add some additional checks to help you secure your Docker Images in your CI. This would help you attain some confidence in your docker image before pushing them to your container registry or a deployment.

It internally uses [Trivy](#) and [Dockle](#) for running certain kinds of scans on these images.

- [Trivy](#) helps you find the common vulnerabilities within your docker images.
- [Dockle](#) is a container linter, which helps you identify if you haven't followed
 - Certain best practices while building the image
 - [CIS Benchmarks](#) to secure your docker image

Home Getting Started

Shipping Aqua Trivy as the default scanner

This release also replaces Clair with [Aqua's Trivy](#) as the default image scanner. Trivy takes container image scanning to higher levels of usability and performance than ever before. Since adding support for Trivy through our pluggable scanning framework in

The screenshot shows the Harbor web interface under the 'Interrogation Services' tab. On the left is a sidebar with navigation links: Projects, Logs, Administration (with sub-links for Users, Registries, Replications, Labels, Project Quotas), Interrogation Services (selected), Garbage Collection, and Configuration. Below the sidebar is a 'DARK' mode toggle and links for Api Explorer and Harbor API V2.0. The main content area is titled 'Interrogation Services' and has tabs for 'Scanners' (selected) and 'Vulnerability'. Under the 'Scanners' tab, there is a section for 'Image Scanners' with a button '+ NEW SCANNER'. A table lists two scanners: 'Trivy' (Default endpoint: https://trivy-adapter:8443, status: Healthy, Enabled: true, Authorization: None) and 'Clair' (endpoint: https://clair-adapter:8443, status: Healthy, Enabled: true, Authorization: None). The table includes columns for Name, Endpoint, Health, Enabled, and Authorization.

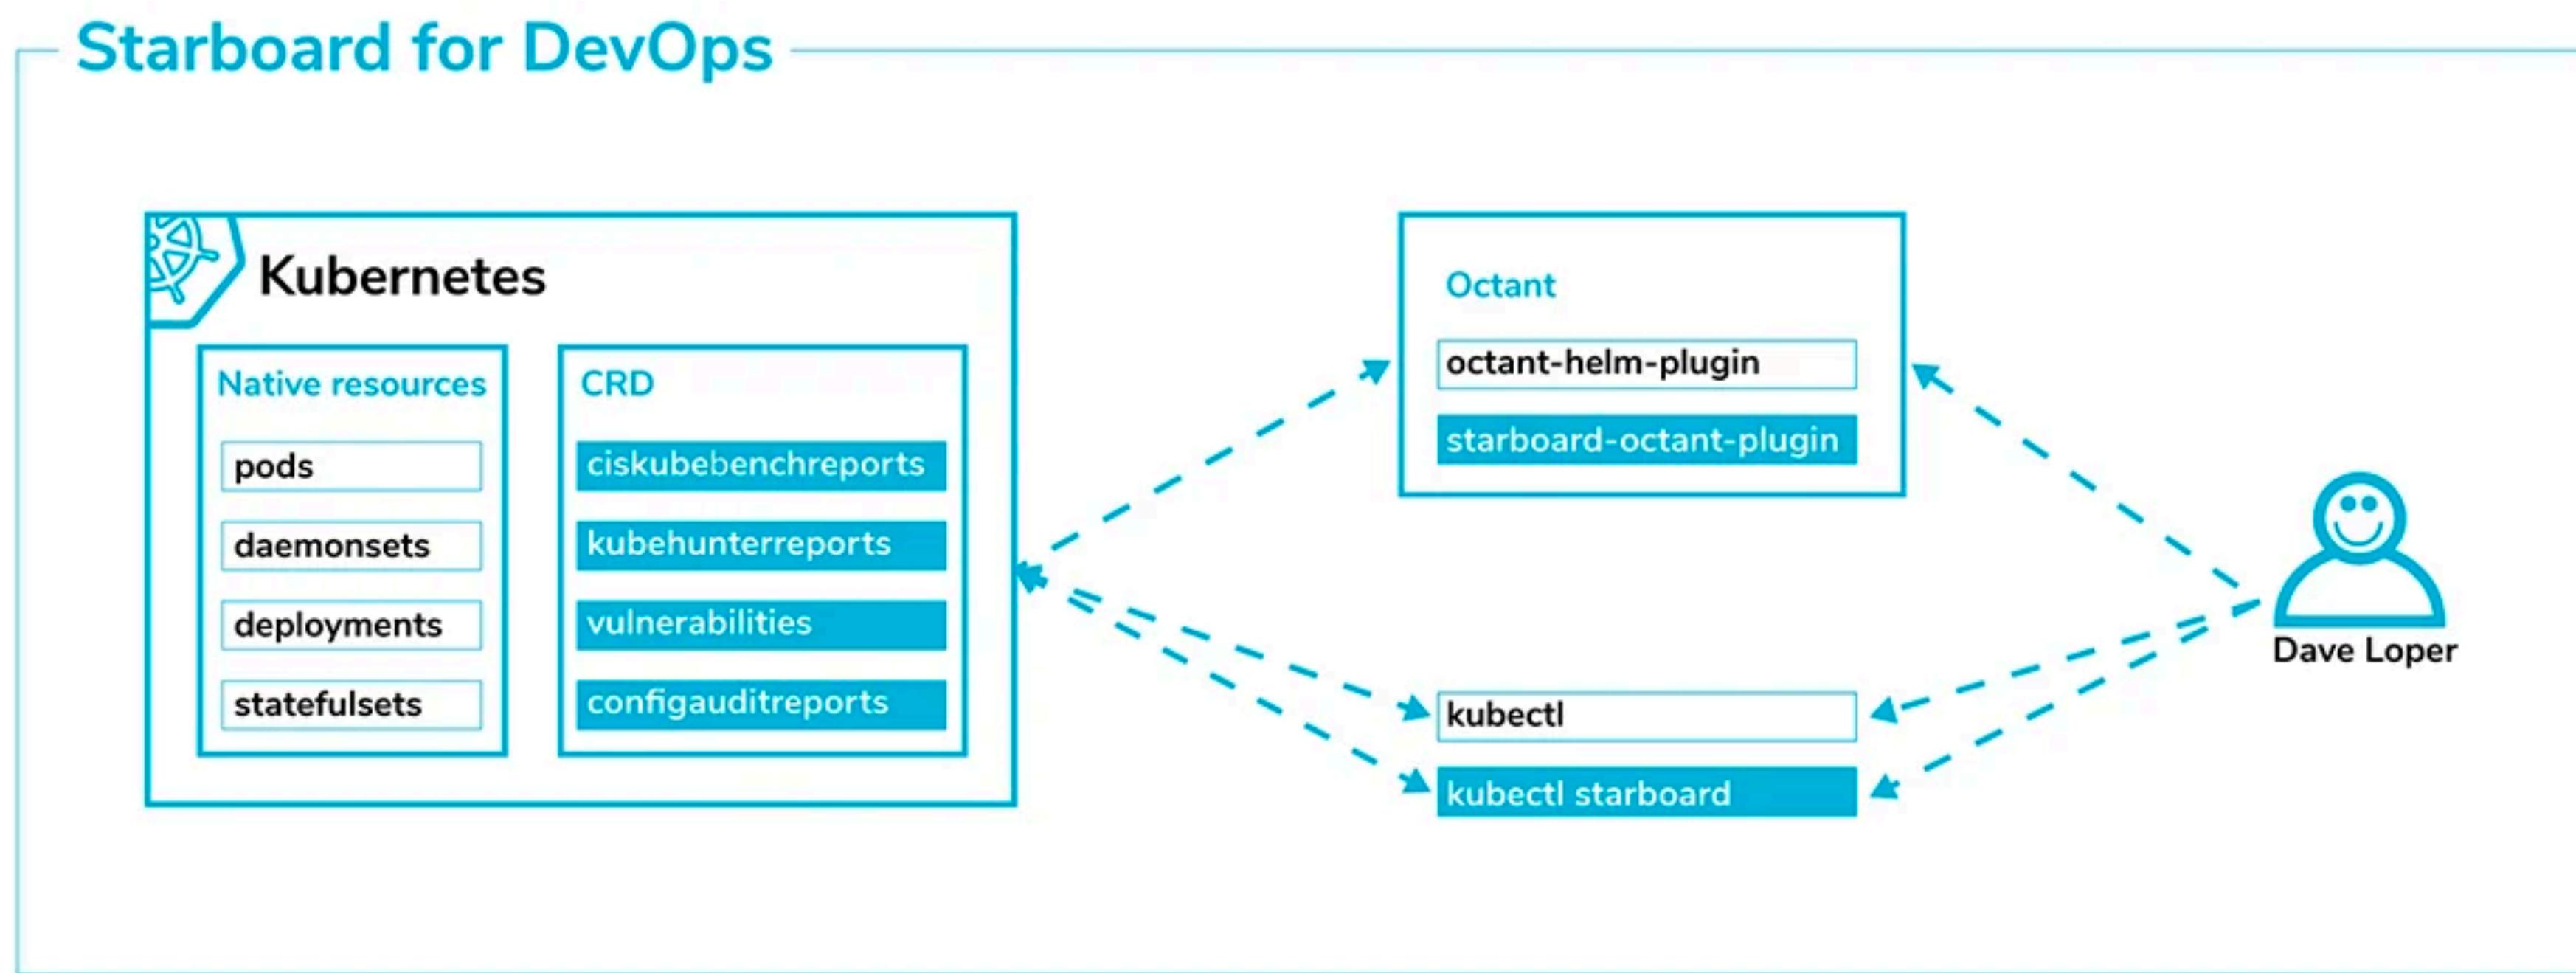

Name	Endpoint	Health	Enabled	Authorization
Trivy	https://trivy-adapter:8443	Healthy	true	None
Clair	https://clair-adapter:8443	Healthy	true	None

Support filesystem (v0.9.0)

Scan your project including a lock file with "filesystem" or "fs" subcommand

```
$ trivy fs /path/to/project
Pipfile.lock
=====
Total: 9 (UNKNOWN: 1, LOW: 0, MEDIUM: 6, HIGH: 2, CRITICAL: 0)

+-----+-----+-----+-----+-----+
| LIBRARY | VULNERABILITY ID | SEVERITY | INSTALLED VERSION | FIXED VERSION | TITLE           |
+-----+-----+-----+-----+-----+
| django  | CVE-2020-7471    | HIGH     | 2.0.9            | 3.0.3, 2.2.10, 1.11.28 | django: potential |
|          |                   |          |                 |                  | SQL injection via |
|          |                   |          |                 |                  | StringAgg(delimiter) |
+-----+-----+-----+-----+-----+
|          | CVE-2019-19844   | MEDIUM   |                 | 3.0.1, 2.2.9, 1.11.27 | Django: crafted email address |
|          |                   |          |                 |                  | allows account takeover |
+-----+-----+-----+-----+-----+
```

Support filesystem (v0.9.0)

Scan the container image from inside the container, specifying "trivy fs /"

```
$ docker run -it alpine:3.10.2
/ # apk add curl
/ # curl -sfL https://raw.githubusercontent.com/aquasecurity/trivy/
master/contrib/install.sh | sh -s -- -b /usr/local/bin
/ # trivy fs /
3bee67d24f08 (alpine 3.10.2)
=====
Total: 5 (UNKNOWN: 0, LOW: 1, MEDIUM: 4, HIGH: 0, CRITICAL: 0)
```

Embed in Dockerfile (v0.9.0)

Scan the container image in Dockerfile

```
FROM alpine:3.7

RUN apk add curl \
    && curl -sfL https://raw.githubusercontent.com/aquasecurity/trivy/master/contrib/install.sh | sh -s -- -b /usr/local/bin \
    && trivy filesystem --exit-code 1 --no-progress /

$ docker build -t test .

...
Step 3/3 : RUN trivy filesystem --exit-code 1 --no-progress /
--> Running in 861287ea13cf

861287ea13cf (alpine 3.7.3)
=====
Total: 1 (UNKNOWN: 0, LOW: 0, MEDIUM: 0, HIGH: 1, CRITICAL: 0)

...
The command '/bin/sh -c trivy filesystem --exit-code 1 --no-progress /' returned a non-zero code: 1
```

Support git repository (v0.9.0)

Scan a remote git repository with "repository" or "repo" subcommand

```
$ trivy repo https://github.com/aquasecurity/trivy-ci-test
Enumerating objects: 25, done.
Counting objects: 100% (25/25), done.
Compressing objects: 100% (18/18), done.
Total 25 (delta 4), reused 19 (delta 2), pack-reused 0
```

Pipfile.lock

=====

```
Total: 9 (UNKNOWN: 1, LOW: 0, MEDIUM: 6, HIGH: 2, CRITICAL: 0)
```
